# Acknowledgements

Principal investigator: Dr Aimee Grant

Co-investigators: Dr Dawn Mannay; Prof Shantini Paranjothy

Research team: Dr Melanie Morgan, Mrs Dunla Gallagher

Additional support with BCW analysis: Dr Stephanie Smits, Dr Kate Brain

# Overview

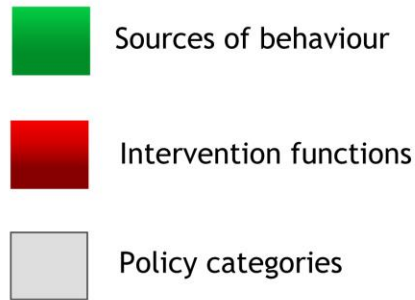

- Background and methods
- Why do we need an analysis of barrier and facilitators?
- The Behaviour Change Wheel
  - The COM-B model
- Data analysis
- Emerging findings
- Conclusions

# Context to my analysis

- Existing interventions often have low uptake and high drop out (eg: NHS stop smoking services for pregnant women)
- Existing interventions may not affect behavior (Building Blocks - Robling et al., 2016. *Lancet*)
- MRC Framework for developing and evaluating complex public health interventions (Craig, 2008, *BMJ*)
  - By understanding the theoretical basis of behaviours, we can design interventions which may change them
- The Behaviour Change Wheel (Michie et al., 2011; 2014) provides one way of understanding the socio-ecological context of health behaviour

# The Behaviour Change Wheel

Michie et al. (2011). *Imp Sci*

# The COM-B model

COM-B domain	COM-B sub-domain	Example
Capability – an individual's ability to engage in a specified activity	Physical	Skills, strength or stamina
	Psychological	Knowledge or psychological skills
Opportunity - environmental factors which allow or facilitate a behaviour	Social	Interpersonal influences, social cues and cultural norms
	Physical	Environment: time, resources, location
Motivation - beyond conscious decision making to include any way in which behaviour is directed psychologically	Reflective	Consider, evaluate (good/bad) and plan intentions
	Automatic	Driven by emotional reactions, desires, impulse or addiction

Michie et al., (2014) The Behaviour Change Wheel. London: Silverback

# The COM-B model

Michie et al. (2011). *Imp Sci*

# Data analysis

- Coded in Nvivo 11 (by Melanie)
- Identifying target behaviours (Michie et al., 2014)
  - Smoke free pregnancies
  - Abstinence from alcohol during pregnancy
  - Healthy diet in pregnancy
  - Infant feeding intention
- I mapped these to the BCW
- Today focus on smoking and alcohol
  - Barriers and facilitators

# Smoking: Behaviour

- 4 abstinent (Donna, Fiona, Gaby, Imogen)
- 2 participants smoked (Cat and Jess)
- 1 used an e-cigarette (Becky)
- 1 had previously smoked in two previous pregnancies (Anna)
- 1 lived in a smokey home, but did not disclose smoking status (Ellie)
- 1 had quit prior to pregnancy (Hayley)

# Smoking COM-B

The smell of smoking  
“makes me gag” (Donna)

Partners judgemental: “Well  
that’s my baby in there.”  
(Anna, Cat, Jess)

Judgement from  
friends, family  
and strangers  
“it was in my  
own house, I  
never walked  
around out and  
about with one,  
it’s not the best  
look.” (Anna)

- Stress (Cat and Anna)  
- Belief alcohol worse  
than smoking (Jess)

Belief PH advice was  
accurate (Becky)

Addiction: “I’ve got to  
have one” (Cat)

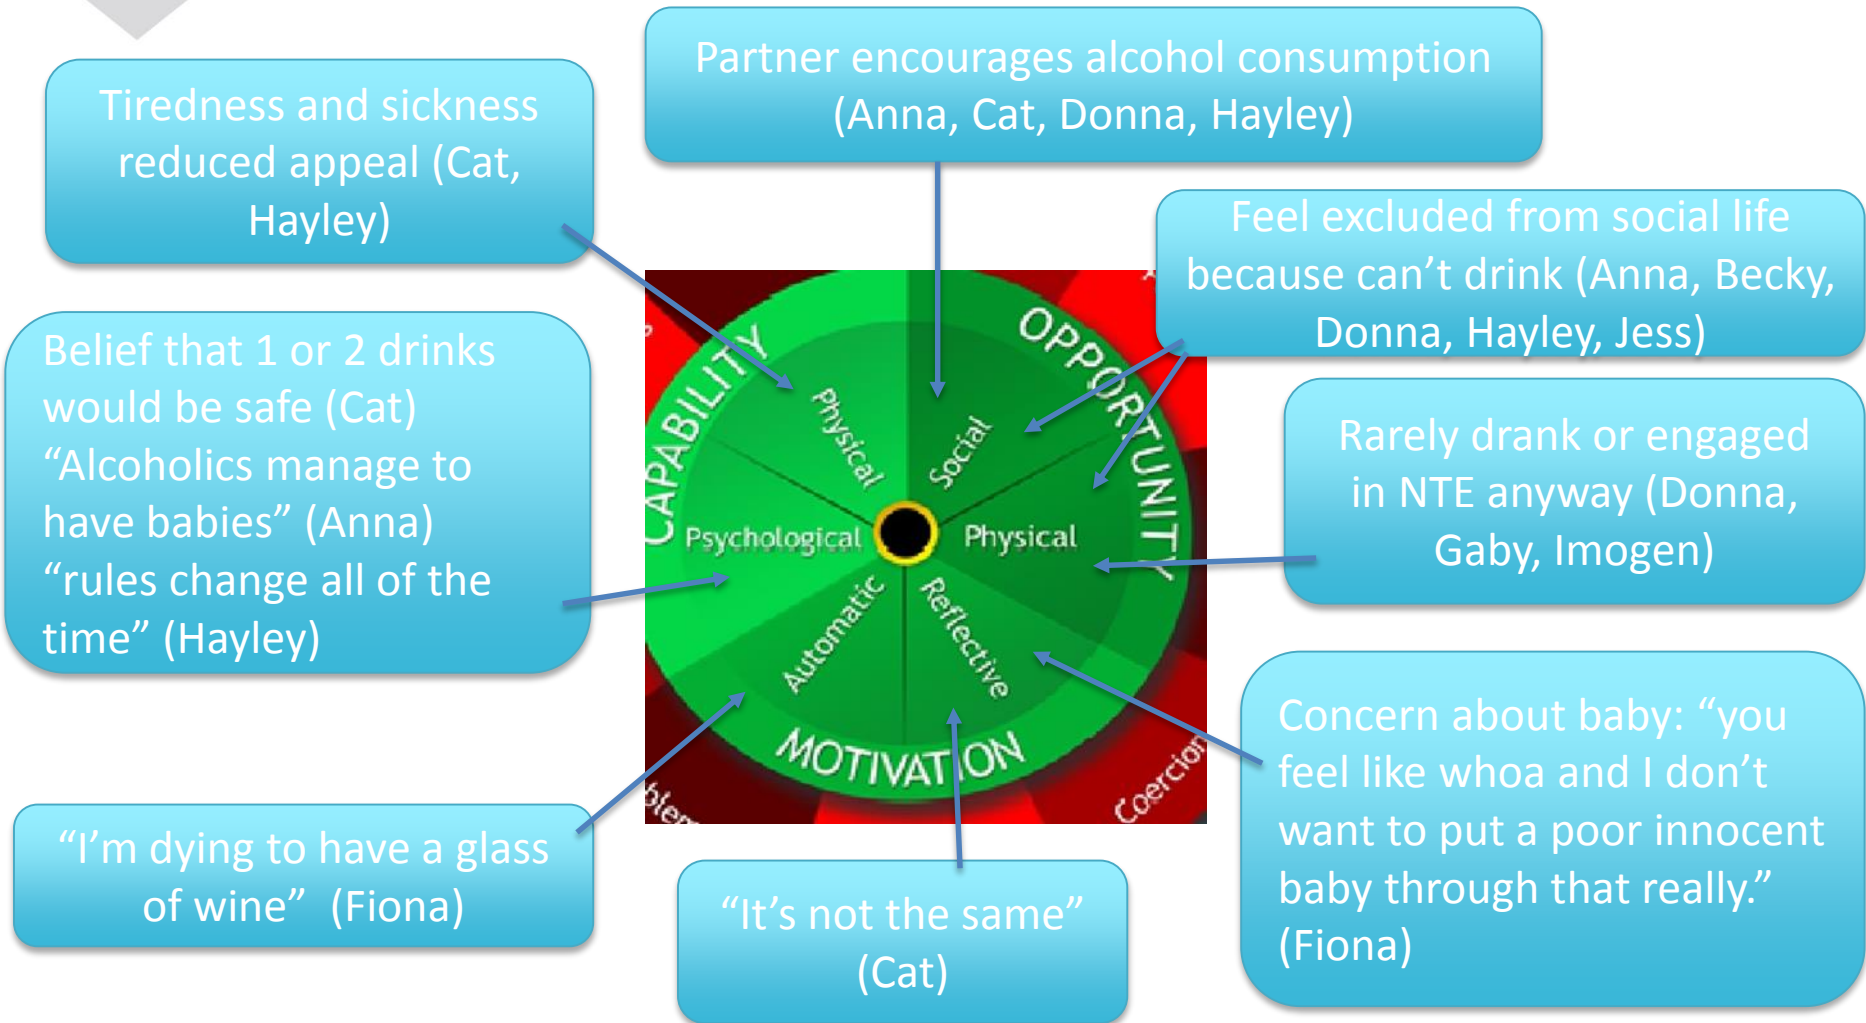

Smoking as a home-based  
activity (Cat, Anna)

Strong views from childhood –  
smoking is bad (Donna, Gaby)

# Alcohol: Behaviour

- Research context:
  - 9 of the women already had children
  - guidance to completely abstain from alcohol introduced Jan 2016
- 5 women were abstinent (Donna, Fiona, Gaby, Imogen, Jess)
- 2 regularly drank a few drinks (Anna, Cat)
- 1 drank on her previous pregnancy but was abstinent now (Hayley)
- 1 would consider having a drink on special occasions (Becky)
- 1 not discussed (Ellie)

# Alcohol COM-B

# Conclusions

- More women abstained from alcohol than remained smokefree in their pregnancies
- The drivers of smoking and alcohol were different, notably highlighting addiction (automatic motivation)
- The social environment influenced both smoking and alcohol consumption
  - Women's behavior in relation to alcohol and smoking was judged – both at home and in public
- It was not always easy to understand what was a barrier and what was a facilitator: this appeared related to how it was perceived by the individual – shame and guilt may affect behavior
- We have applied for funding to follow up the ladies following birth
  - outcome March 2017

# Thank you
